MOBILE FEEDER AND MOUNTING DEVICE

Related Application

This application is a Division of Application No. 10/054,977, filed January 25, 2002, which claims priority to German Application No. 201 01 395.9, filed January 26, 2001.

Field of the Invention

The invention relates to a mobile feeder ~~according to the preamble part of claim 1 or 2~~ and to a mounting device for a mobile feeder ~~according to the preamble part of claim 13~~.

In the Abstract

Please substitute the following amended Abstract for the Abstract as currently pending (deleted matter is shown by strikethrough and added matter is shown by underlining):

A mobile feeder [[B]] has a distributor conveyor band [[V]] which ~~at least~~ is adjustable in at least a height direction. The distributor conveyor band [[V]] is connected to a carrier frame [[T]] and can be removed with the [[its]] carrier frame [[T]] from the mobile feeder [[B]]. The mobile feeder is equipped with a mounting device [[M, M']] for the distributor conveyor band [[V]]. The mounting device at least temporarily is provided at the mobile feeder, can be set on the ground, [[20]] and engages the carrier frame from below ~~under the carrier frame T~~. Matching connection assemblies ~~A1, A2, A3, A1', A2', A3'~~ releasably connect the carrier frame [[T]] to the mounting device. Drive assemblies [[Z, Z1]] at the mounting device ~~and/or at the distributor conveyor band V serve to~~ adjust the carrier frame relative to the mobile feeder to a ground contact position of the distributor conveyor band [[(V)]].
